

RNE CORRIDOR

C06

■ Mannheim/Gremberg–Lyon–Nîmes–Perpignan–Barcelona–Valencia/Paris–Madrid–Lisboa

On RNE Corridors we:

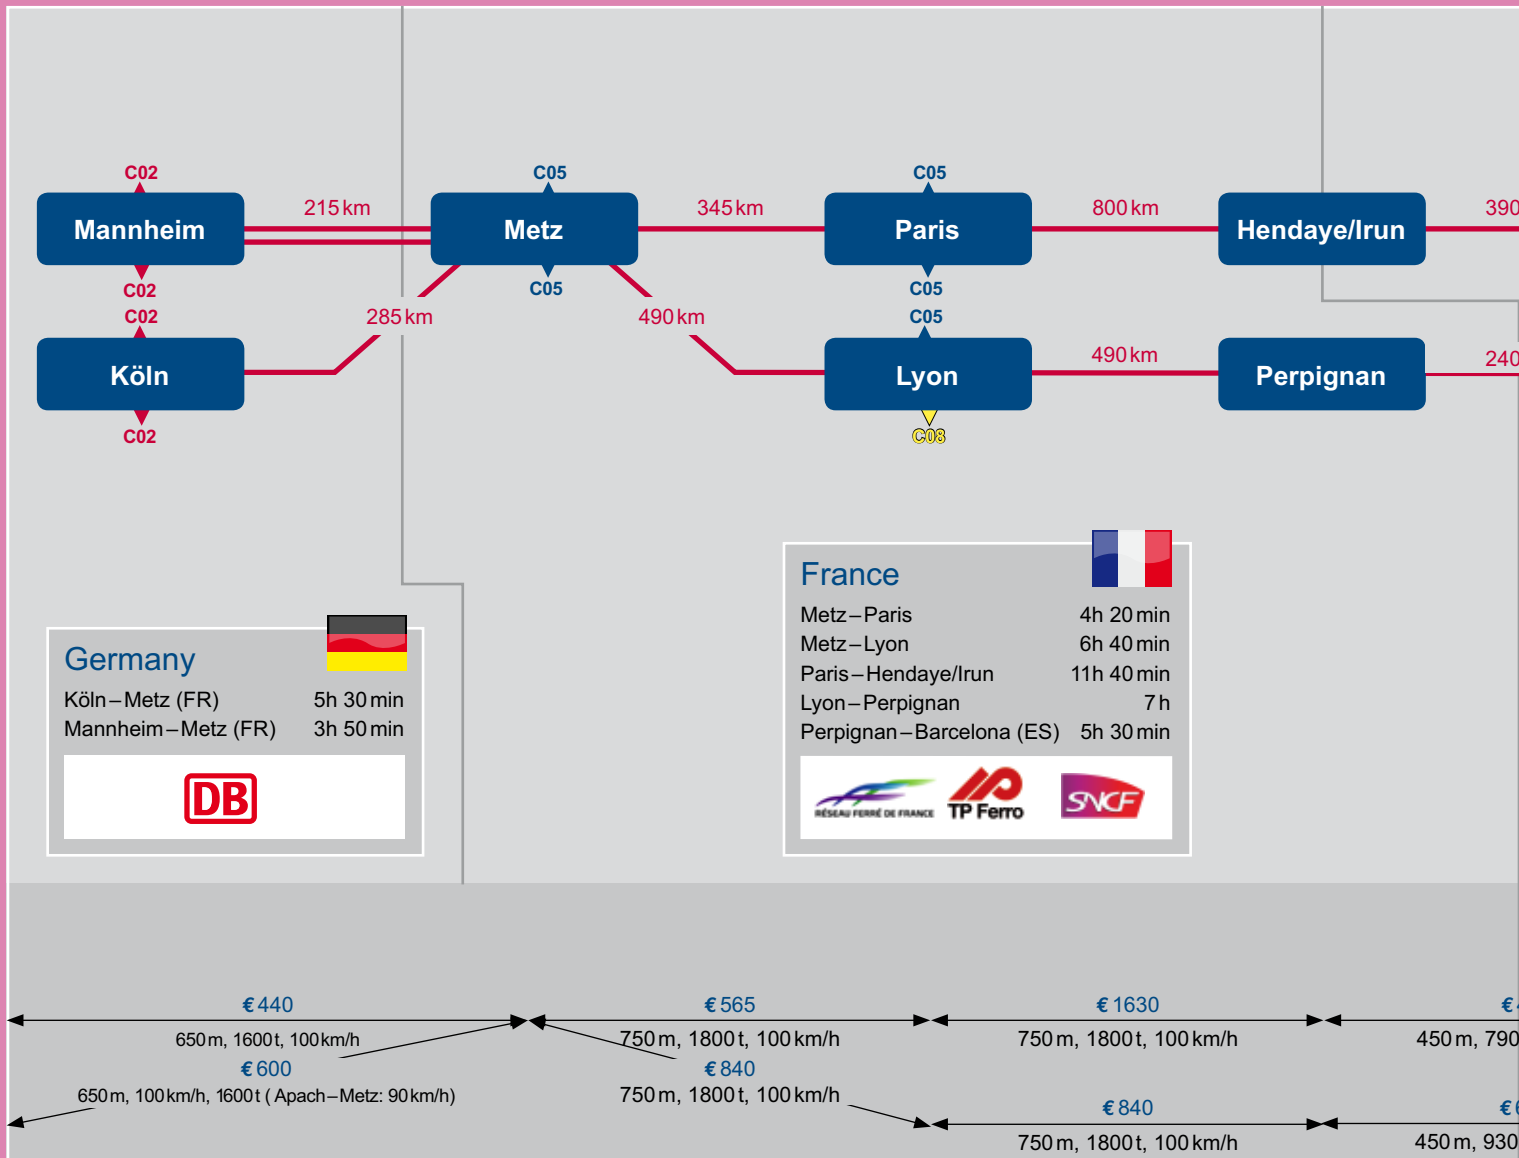

- deliver a more reliable forecast of the available infrastructure to our customers
- apply the harmonized deadlines for planning international train paths
- shape corridor infrastructure capacity according to the market's requirements
- facilitate the capacity request procedure by providing pre-constructed international train paths
- improve train punctuality on the basis of regular performance monitoring

This will help our customers to plan their consignments more efficiently and thus become more competitive.

On Corridor C06 we work in close cooperation with the EEIG Corridor D.

RNE CORRIDOR C06 Mannheim/Gremberg–Lyon–Nîmes–Perpignan

Edition 12/2009

Detailed information regarding the EEIG Corridor D:

www.corridord.eu

Bilbao – Barcelona – Valencia/Paris – Madrid – Lisboa

(ne) = non electrified / (pe) = partly electrified
 If not mentioned: electrified

The displayed path/train parameters, times and charges may differ in reality, as all calculated figures are average figures based on standard trains. The displayed train length comprises traction unit(s) in some Infrastructure Managers; in others, it doesn't. In border stations/on border sections, special operational regulations have to be applied. Please consult the IMs' Network Statements in any case!
